-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 June 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frechet (U.S. Patent No. 6,887,384) in view of Xie (U.S. Patent No. 6,749,749). At best, the claims differ from Frechet (U.S. Patent No. 6,887,384) in reciting degassing and use of pressure. Xie (U.S. Patent No. 6,749,749) (column 22, lines 34-45) discloses that degassing the polymerization mixture gets rid of oxygen, which acts as an inhibitor and is detrimental to the resolution and reproducibility of the columns. Xie (U.S. Patent No. 6,749,749) (column 7, lines 41-44) discloses that applying pressure during polymerization compensates for shrinkage and creates uniformity in the distribution of separation-effective openings and avoids wall effect voids. It would have been obvious to degas and use pressure in Frechet (U.S. Patent No. 6,887,384) because Xie (U.S. Patent No. 6,749,749) (column 22, lines 34-45) discloses that degassing the polymerization mixture gets rid of oxygen, which acts as an inhibitor and is detrimental to the resolution and reproducibility of the columns, and Xie (U.S. Patent No. 6,749,749) (column 7, lines 41-44) discloses that applying pressure during polymerization compensates for shrinkage and creates uniformity in the distribution of separation-effective openings and avoids wall effect voids.

The restriction has been reconsidered, deemed proper, and made final for the reasons of record.
